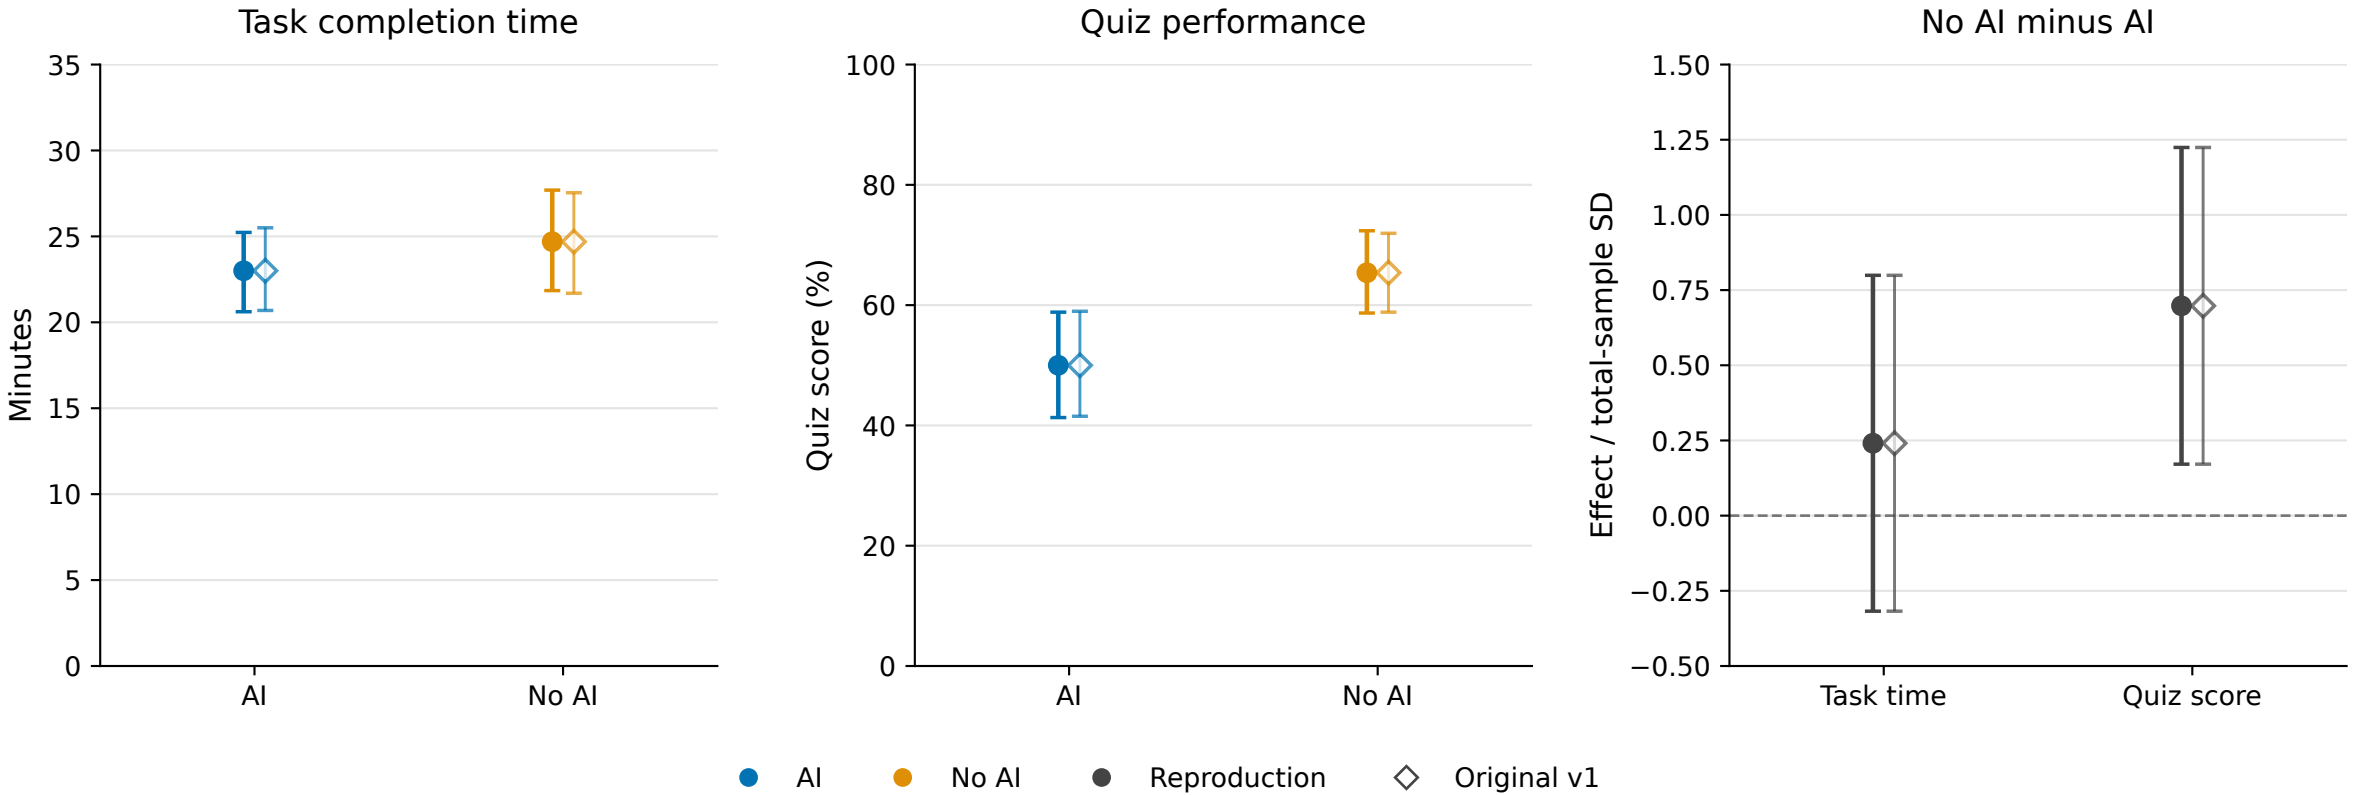
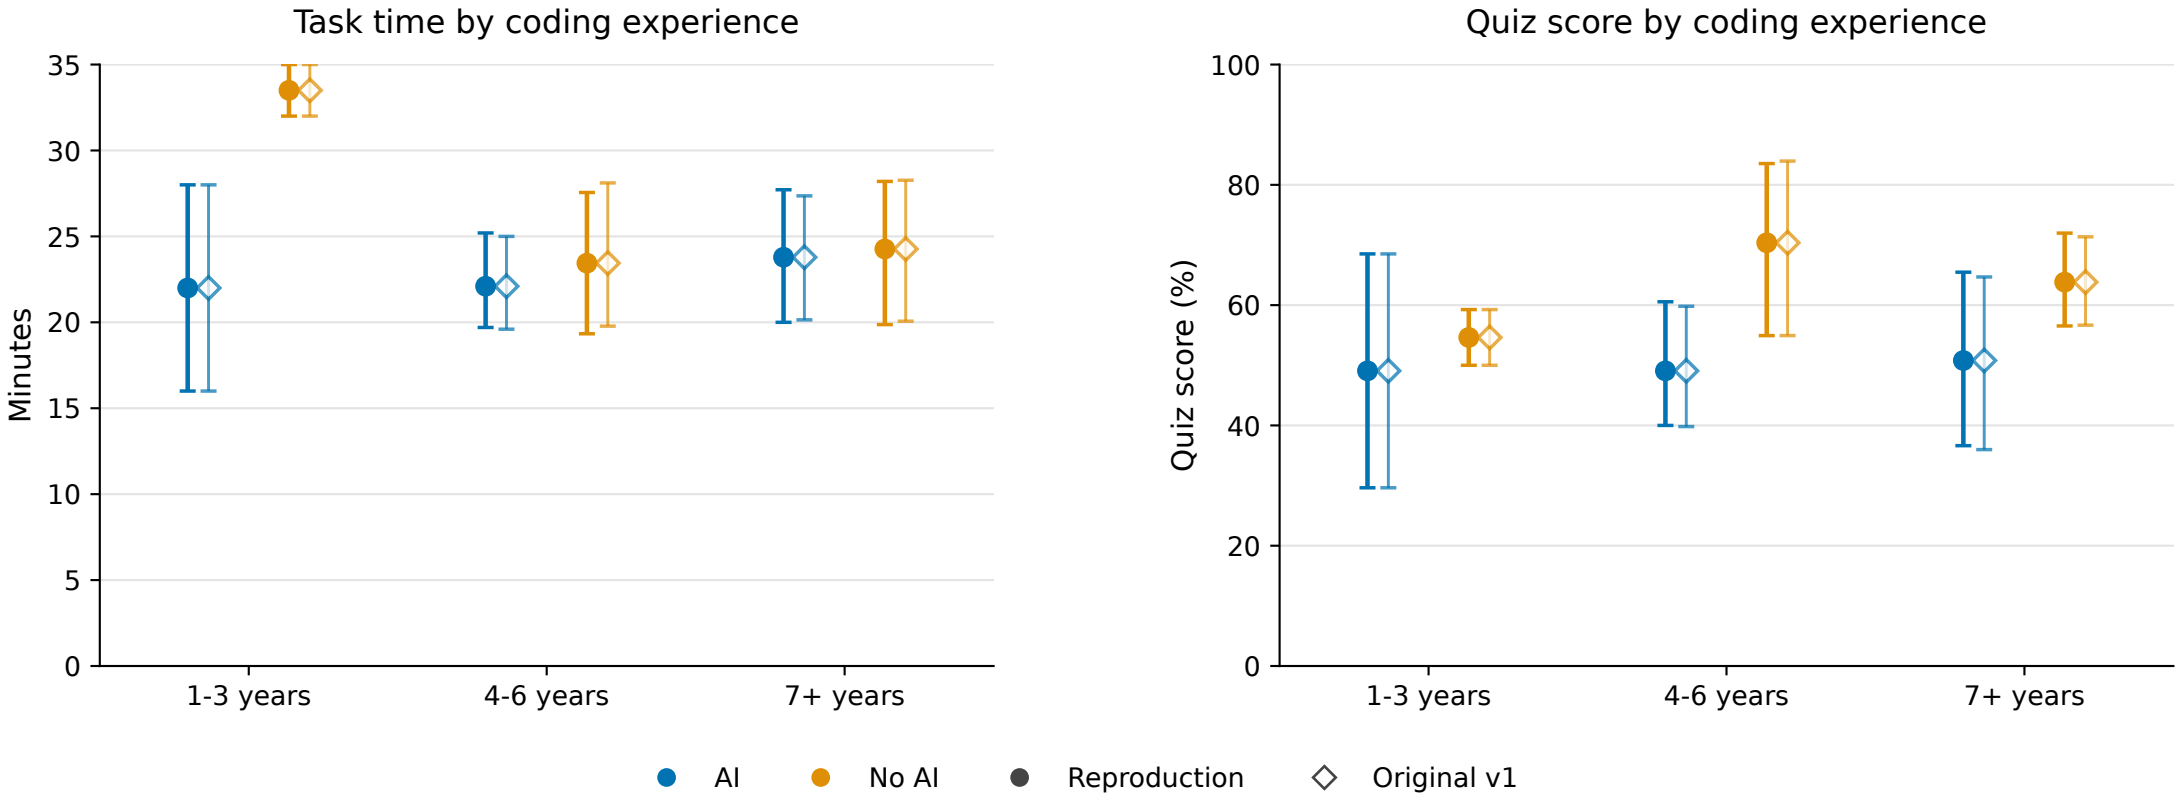
# P080 / original Figure 6: complete primary RCT (N=52)



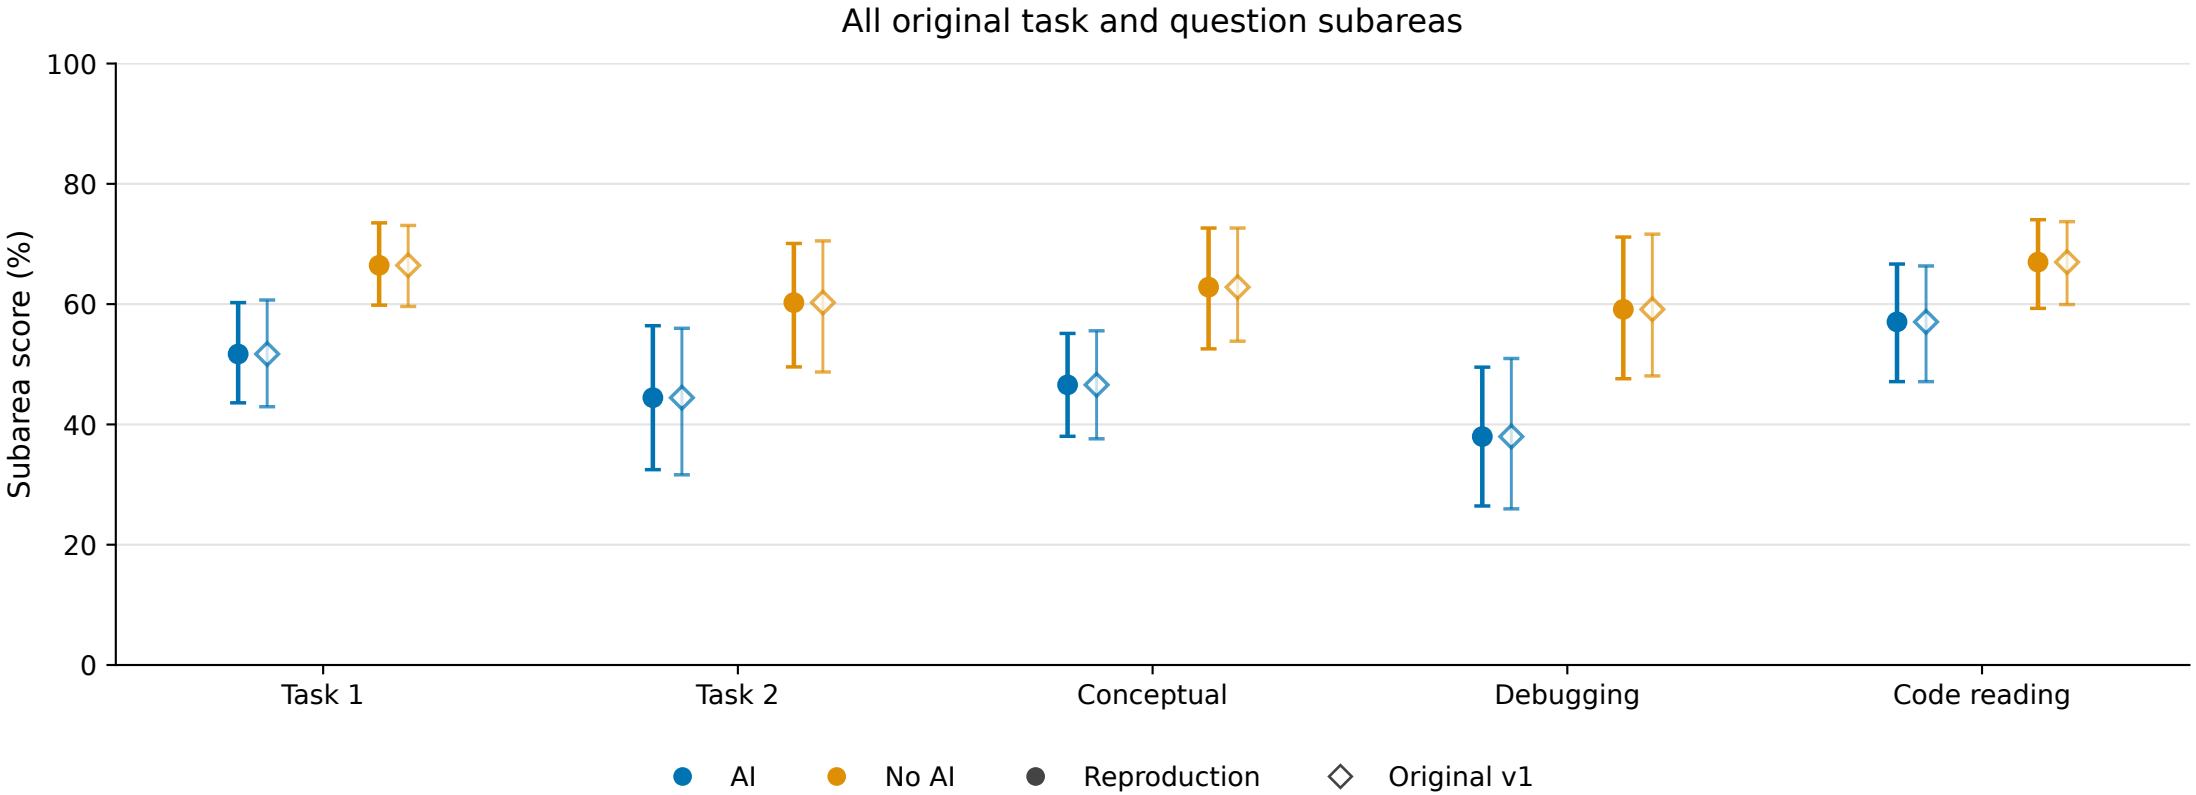
Filled circles: fixed reproduction. Open diamonds: original v1 published targets. Group intervals show one fixed 1000-draw percentile-bootstrap replay.
Historical source endpoints passed the prospectively fixed familywise order-rank/DKW Monte Carlo gates; acceptance envelopes are not drawn as sampling CIs.
The effect panel uses exact conventional OLS confidence intervals; total-sample SD differs from pooled Cohen d.

# P080 / original Figure 7: all experience strata



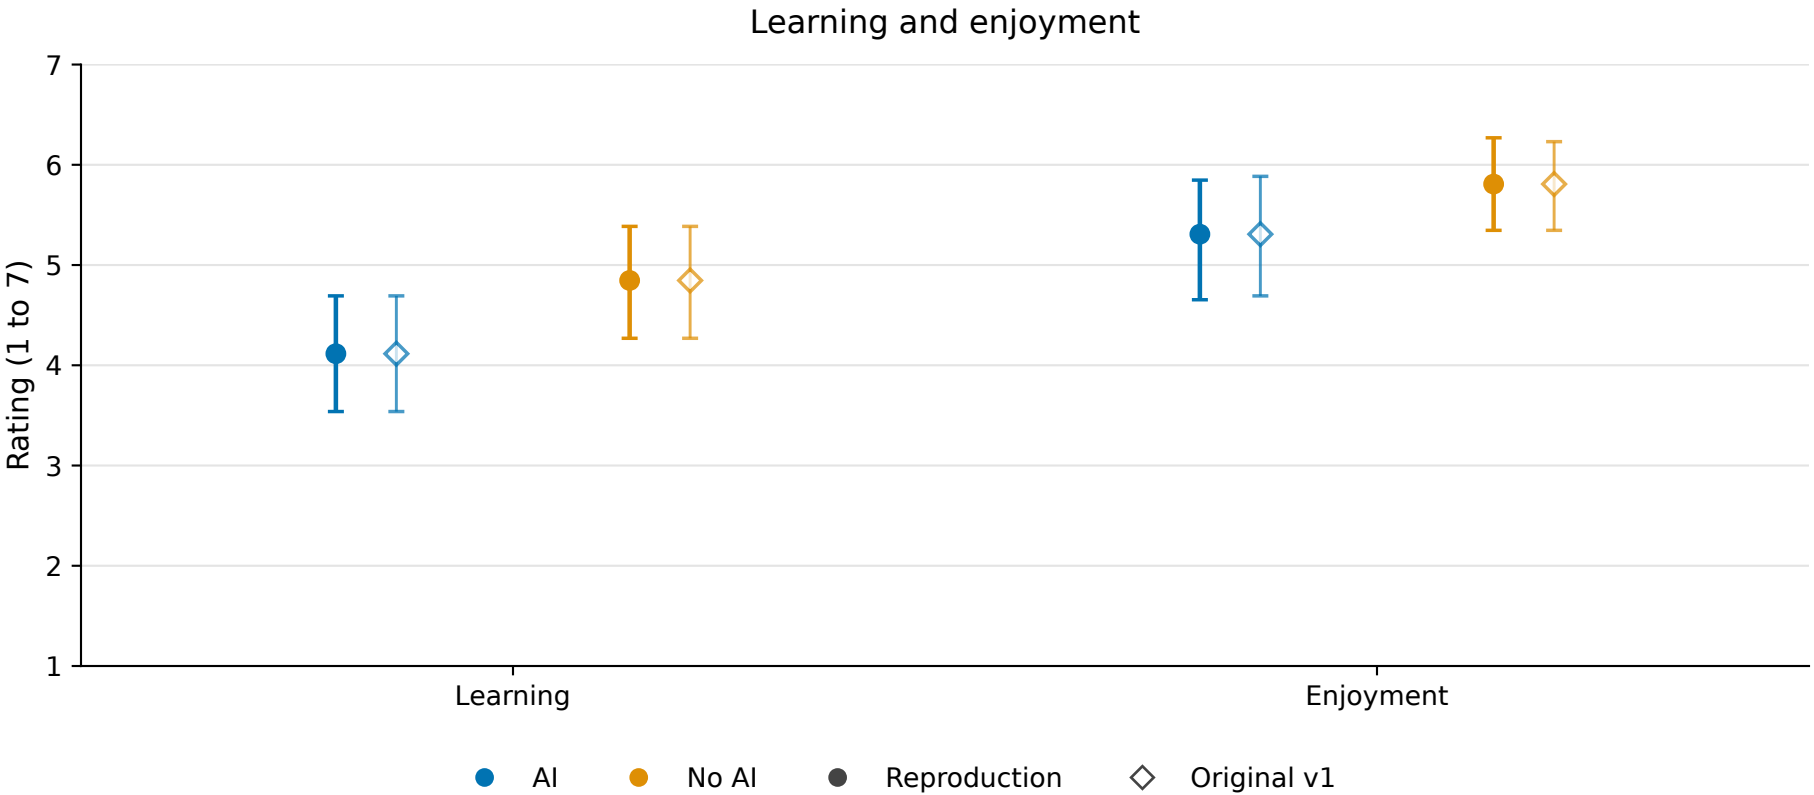
Filled circles: fixed reproduction. Open diamonds: original v1 published targets. Group intervals show one fixed 1000-draw percentile-bootstrap replay.
Historical source endpoints passed the prospectively fixed familywise order-rank/DKW Monte Carlo gates; acceptance envelopes are not drawn as sampling CIs.
Original AI / No-AI stratum sizes: 2/2, 10/9 and14/15. No strata excluded.

# P080 / original Figure 8: all five original subareas



Filled circles: fixed reproduction. Open diamonds: original v1 published targets. Group intervals show one fixed 1000-draw percentile-bootstrap replay.
Historical source endpoints passed the prospectively fixed familywise order-rank/DKW Monte Carlo gates; acceptance envelopes are not drawn as sampling CIs.
Original integer truncation and overlapping Q3 assignment are preserved; fractional diagnostics remain supporting only.

# P080 / original Figure 9: all self-reported outcomes



Filled circles: fixed reproduction. Open diamonds: original v1 published targets. Group intervals show one fixed 1000-draw percentile-bootstrap replay.
Historical source endpoints passed the prospectively fixed familywise order-rank/DKW Monte Carlo gates; acceptance envelopes are not drawn as sampling CIs.

# P080 / original Figure 10: all task-stage difficulty outcomes

Filled circles: fixed reproduction. Open diamonds: original v1 published targets. Group intervals show one fixed 1000-draw percentile-bootstrap replay.
Historical source endpoints passed the prospectively fixed familywise order-rank/DKW Monte Carlo gates; acceptance envelopes are not drawn as sampling CIs.
The original effort mapping and actual released CSV aliases were fixed before outcomes.
